

Comparing Quality Performance: OB Hospitalist Teams with Physicians only vs. Physicians and Certified Nurse-Midwives

At Ob Hospitalist Group programs nationwide, we've observed a powerful trend: strong partnerships between OB/GYNs and Certified Nurse-Midwives (CNMs) as part of the OB hospitalist team lead to better outcomes and healthier patients. Data shows that programs with CNMs consistently outperform those without CNMs on critical quality metrics, such as lower C-section rates. By fostering collaboration, hospitals empower physicians to focus on complex or emergency cases while ensuring patients continue to receive attentive, high-quality care from midwife hospitalists.

Quality Performance

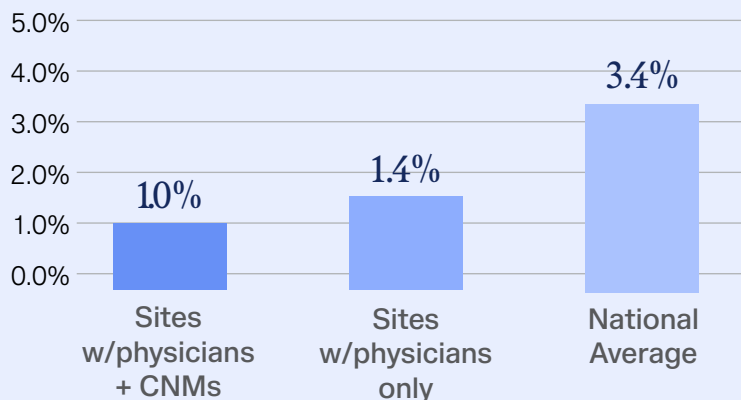

Data time period: August 2025 – July 2026

NTSV+ C-Sections (managed by OB hospitalist team)

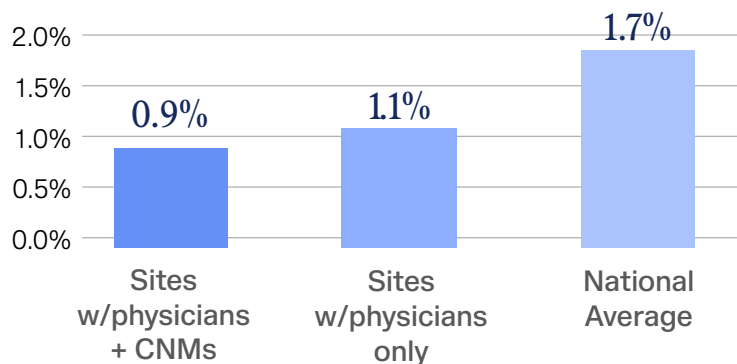

OBHG's performance at sites with CNMs is **26.4%** lower relative to national performance.

Vaginal Delivery w/Episiotomy

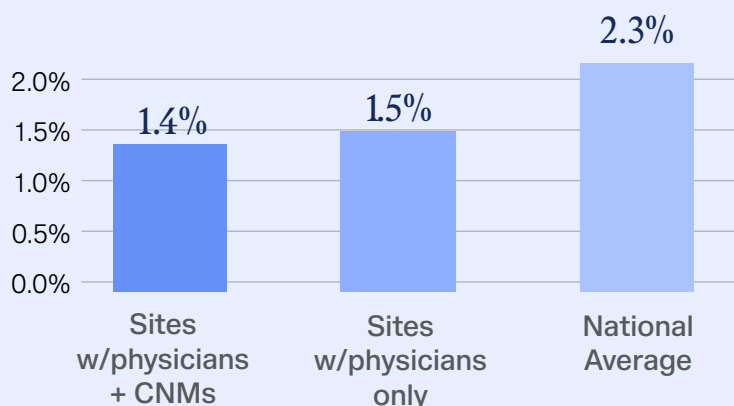

OBHG's performance at sites with CNMs is **70.6%** lower relative to national performance.

3rd/4th Degree Lacerations w/o Instrument

OBHG's performance at sites with CNMs is **47.1%** lower relative to national performance.

Total Lacerations

OBHG's performance at sites with CNMs is **47.1%** lower relative to national performance.

Proven Results: Certified Nurse-Midwives enhance quality and outcomes as part of the OB hospitalist team

Data shows that OBHG's quality rates are lower than the national average, a testament to the effectiveness of OBHG's model in improving outcomes. At sites where Certified Nurse-Midwives are integrated as part of the OB hospitalist team, the rates are even lower, below OBHG's already exceptional standard.

"The recent data reinforces that certified nurse-midwives enhance maternal care by reducing unnecessary interventions, advancing safety and improving key outcomes," says Dr. Mark Simon, Chief Medical Officer of OBHG.
